...the appointment of the board and the reorganization of the Cotton Control Association in the various counties, the cotton reduction program for 1935 has begun," said A. L. Smith, chairman of the State Review and Allotment board, he said.

"Articles of Association for the cotton production control associations have been sent to the farm demonstration agent rapidly. One important change from last year's plan is to be noted. Cotton producing communities which consisted of not less than 300 producer units last year must consist of not less than 500 producer units this year," Mr. Smith said. These communities will be designated by the farm demonstration agent on the basis of the number of producer units of which cotton production was reported in the applications for allotment and tax exemption certificates in 1934. There shall be one community committee consisting of three members for each community designated. A county having less than 500 producer units will have one community committee.

"Any producer is eligible to sign a contract who is an owner, cash tenant, standing or fixed tenant, or managing share tenant jointly with the landholder, and who operates or controls a farm on which cotton was planted in 1934 or 1935 and on which will be planted in 1935 and which was not covered by a 1934-1935 reduction contract.

Any producer is also eligible who...

...such crop in a regular rotation or because such farm was covered by an agreement with the Government to eradicate pink boll worm but on which was planted during the period 1928 to 1933 and on which cotton will be planted in 1935.

CHILDREN AND TUBERCULOSIS

Speaking of children and their susceptibility to tuberculosis, Dr. John W. Brown, State Health Officer, said: "Few people realize that babies and young children are very likely to catch tuberculosis if they are kept in the rooms with people who have the disease, use the same dishes, sleep in the same beds or are handled and kissed by people who have tuberculosis.

"Babies and young children pick up the germs of tuberculosis just as readily as they pick up the germs of measles or whooping cough or any other of the so-called children's diseases. But tuberculosis is different from other diseases in certain particulars. Unlike most diseases, it has more than one form. Babies who get tuberculosis may not show the symptoms we associate with the disease in older people. But the disease in most cases develops rapidly and is likely to end fatally. Tuberculosis in babies and young children is a very serious matter, but recent studies have shown that if young children are removed promptly from contact with the disease and given the necessary care, many lives can be saved.

A great deal can be accomplished...

...medical attention is given promptly. Tuberculosis doesn't simply happen. Nobody is born with the disease. Everybody who develops tuberculosis gets it from some other source. Children and young people who have been in contact with persons ill with tuberculosis are especially likely to contract it.

WHAT WOULD YOU DO IF YOU SAW...

- Fla. Whitman without her dimple?
- Jewel Dean when she acted simple?
- Violet Fuller six feet tall?
- Virgil Hutton half as small?
- Virginia Pope turning a snob?
- Milton Watts without his black shock hair?
- Doris Williford going on a tear?
- Stanley Ray without his strut?
- Maurice Dickens with classes cut?
- Bill Mann when he didn't flirt?
- Ruby Ruth Westcott being pert?
- Forelle Williams being ever so shy?
- Virginia Shivers without eyes on the sky?
- Irma Davis without her blush?
- Freshman Class being made to hush?
- Emo Lillian Griffin being quiet?
- Shearmon Hamerly on a reducing diet?

Senator Borah has had no luck in his efforts to make the Republican party turn toward the left. The G. O. R. would rather be right than elect a president. The New Yorker Doctor Dato has ordered changes in the diet of the little Dionnes who have been getting fatter. Maybe the doctor got steam-lined notions in New York. —Arkansas Gazette.
