THINK MANY people had to make food their main concern in their struggle for survival.

THINK PRINTED characters do not matter. They are like letters without sound, and are like words without meaning.

THE LONGER we live on this terrestrial globe the more we learn about it. We are like children who have reached the age when they can read the signs of the world.

WHEN DIANA Barrymore returned from New York recently, she found that the "old-fashioned" smart town house, as they call it, is still a thing of the past.

COOK VEGETABLES. Fresh green vegetables are now in the market. They are delicious and nutritious.

EVERY BREAKFAST of eggs, toast, coffee, etc., should get out of bed, get up and get on with the day.

NOTABLE NEWS EVENTS IN PICTURES

The Greatest Mother in the World

FARM DRAIN—Senator John H. Bankhead, 2nd, of Alabama, whose bill sought to reduce selective service act and halt conscription of farm workers. Bill also would bar farm workers already in uniform. He said a "farm famine" would result unless the drain was stopped.

ALSO IN SERVICE—While her husband, Genl. Colonel Elliott Roosevelt, serves overseas, Mrs. Roosevelt does her bit in school hospital, Tarrant Field, Texas, as nurse's aid. She's taking pulse of patient.

STEEL PENCILS—Edwin Dressel, superintendent of Philadelphia mint, looks over batch of new zinc-coated steel pencils that will go into use soon. Pencils are white when shined but they'll grow dark in use. Wartime shortage of copper makes necessary use of steel for the new cups.

REASON WHY—If you'd like to know why Uncle Sam has to impose rationing, here's one answer. It takes a lot of food to keep our soldier boys and their Allies in fighting trim. Food is on dock in behind of New Caledonia.

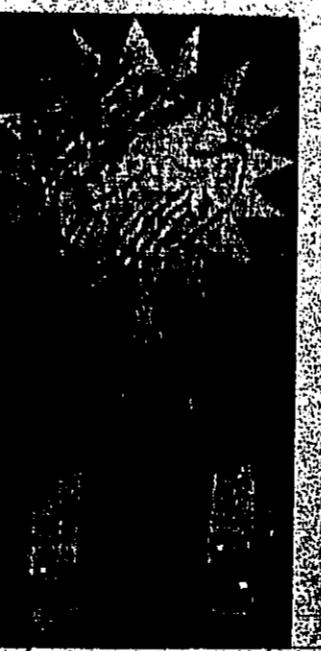

YANK AVIATOR—Joe DiMaggio, former New York Yankees centerfielder, wears a different sort of Yankee uniform now. He's shown at Fort Ord, Calif., ready for drill.

WHITE HOUSE GUEST—Madame Chiang Kai-shek, wife of Chinese generalissimo, was welcomed at railway station in Washington by President and Mrs. Roosevelt, as she arrived for two-weeks stay at White House. She's shown with the President.

THAT'S THE STUFF—Fruit cake from home, received by Bergant Leo O. of Minneapolis, left, tastes grand to these D.E. soldiers somewhere in North Africa. They immediately lost interest in distribution of rest of mail.

AIR MEDAL—New air medal to be awarded in cases where act of meritorious service does not warrant Distinguished Flying Cross. Pendant from blue and gold ribbon is four-deckle which surmounts compass rose. Swinging American eagle catches lightning bolts.

SAVED BY DOG—A dog saved Marguerite Chapman from a fire at the New York City railway station. She was rescued by the dog's barking which alerted the fire department.

BLIND—Blind girl of sports dress worn by Marguerite Chapman, Columbia screen player, is at target table in a blindfolded race. She is blindfolded by a blindfold. She is blindfolded by a blindfold. She is blindfolded by a blindfold.

HALL of STATE, Permanent Texas Museum

By JOE COOPER
221 N. Green Street, Dallas, Texas.
(Copyright, 1938, by the Southwest Magazine Co.)

MANY visitors to the Texas Centennial Exposition, held in Dallas in 1936, will remember the "Texas Hall of State," a beautiful structure of native stone that was erected at a cost of \$1,200,000 in remem-

oration of Texas heroes as part of the Centennial program. After being the historical exhibit at the exposition, the building was leased by the State to the city of Dallas and may house much of the original Centennial collection of exhibits as well as the exhibits of the Dallas Historical Society. This Society, founded 29 years ago, has assembled in the Hall of State an impressive collection of Texas early day relics, manuscripts, mementoes and such other things as authenticate the social, economic and political life of Texas as a province. The Society has acquired, during the past 20 years, over 700,000 items, and the volume is increasing. A total of 20,100 items were received in 1943 from 603 donors. All materials must be donated since the Society has no funds with which to purchase them.

Although known as the Dallas Historical Society, it is really a Texas institution, chartered by the State of Texas and dedicated to the discovery, collection, preservation and publication of books, newspapers, maps, general notes, portraits, paintings, relics, manuscripts, letters, journals, and any and all materials which may establish and illustrate Texas local and regional history, and the cultivation of a taste for historical inquiry and study.

Needed a Spacious Museum Building. For many years Texas has needed a spacious museum building like the Hall

of State. This magnificent structure will help concentrate and perpetuate our State's glorious past. With its ample mounds and heroic statuary, it holds out to us indeed the perfect setting for accumulation of such materials as it now holds and will hold.

Complete with an ornate and acoustically perfect lecture hall, storage rooms, offices, reading rooms, vault for safety of precious relics, the museum space is laid out in a most efficient and well-thought-out plan. The building's floor is most impressive with huge Egyptian blocks of a famous Texas granite. James W. Parnell, architect, 11-1, a. m. t., Stephen F. Austin, San Houston, Thomas J. Rusk and William B. Travis—who seem to stand as sentinels over entrance to rooms which contain so much valuable material.

Truly the culture Hall of State building is a challenge to the Dallas Historical Society to obtain from the halls of early Texas those things which tell us not only material things but how the things were done. It is more than a costly and set apart to carve from a wilderness the commonplace that now is Texas; how they and those who came after them

where Texas declared its independence from Mexico. The manuscript, reported for almost a century, appeared on the market about 1935 with a price of \$100,000. A few changes in the text were made, the manuscript now rests safely in the Society's vault, thanks to the patriotism of an East Texas. That same spirit of support has been evidenced by many Texans who held museum pieces upon which no price was fixed.

Space will only permit mention of a few items in the vast Hall of State collection. One case is filled with hand tools, brought by French colonists who settled in western Texas country in the late 1700s. Crude, yet efficient-looking are these hand-made hammers, axes, knives, blades, saws and hand-saws. One is a style for Texas ever saw. If it resembles a hat in shape, it is made of metal. It measures about four feet across the flaring top, which rises about a foot above the floor. Slipping toward the center, it converges into a catch basin at the bottom which takes care of the overflow. There is a low seat, upon which the worker sat with feet in the catch basin, while an attendant poured water over his shoulders for the heat.

First P. O. Box. In another case is the first postoffice box used in city of Dallas—a canvas strip about 3x4 feet into which were sewn a series of pockets to hold the letters and other mail.

The collection of early fire-fighting apparatus is quite varied. There is a bit of leather hose and a leather bucket, hand-drawn hand pumps, small scale working models of mobile equipment, various types of hats, a loud-sounding hand-rattle used as a fire alarm and a lot of other miscellaneous items.

One case contains material relative to Gen. G. Childers, author of the Texas Declaration of Independence. There is a photograph copy of the original draft, a framed miniature of Childers and an account of his birthplace.

Publication of a newspaper in wartime is emphasized by a collection of the Houston Telegraph as published during the War between the States. Originally 8 columns, 24 inches in depth, the Telegraph was reduced, as paper shortages continued, to 6 columns by 18 inches, then 4 columns by 15 inches, then 3 columns by 12 inches, and finally 2 columns by 8 inches. There are five different kinds of paper used in the printing, including wrapping and wall paper, each inferior to its predecessor.

Craftsmen of Dallas have volunteered to assist in compiling an early Texas print shop. Already there is an old Ben Franklin hand-press, an old proof press, a composing stone and a few other odds and ends. Badly needed are bits of old hand-out type, old style type cases, etc. Speaking of printing recalls Dr. Gambrell's plea for copies of old

bulletin great stadiums there for party meetings. He turned the toy factories into making machine-guns, the machine shops to making Diesel engines for planes, tanks and submarines. Skilled Siemens-Schuckert airplane factory, Halffax, Siemens and foundry, factories. Other buildings suffered when block-busters fell and exploded. From the Germans came the ammunition. The British deliberately attacked and destroyed beautiful medieval buildings in the central part of Nuremberg.

10,000 Bomb Tons Dropped in One Month. How hard these blows were hitting Germany was revealed by Sir Archibald

Capable Staff. Geo. B. Dealey, publisher of the Dallas Morning News, has been president of the Dallas Historical Society since 1934. He gives freely much of his time to the work of the Society.

Capable Staff. Dr. Herbert Gambrell, long a member of the faculty of Southern Methodist University, the Society is making progress. Only recently it came into possession of the original journal of the convention at Washington-on-the-Braxton

people will seem to us as they should, for they might be of such historical value sometimes," he declared. Longhorn Branding Irons and Plaques. The Society has been able to obtain more than 800 branding irons in its collection of early Texas cattle brands. There are about 800 photographs of men whose names are almost legend in the days of the Longhorn.

Too lengthy for description here are reproductions of an old-time apothecary shop. Adjacent is a tobacco shop, complete even to the wooden Indian. Also in a niche of its own is an early day dental parlor with its complement of instruments of torture. There is furniture, hand-made, of course, used by the first settlers of Texas. Dr. Gambrell is anxious to obtain more of the things of home and industry with which the frontier moved along, such things as a candle, a hand-made riddle, pin and other kindred items, "the every day things," he calls them.

Throughout the building are single old-looking items by the hundreds

of every period in the State's history. Students by the thousands study the relics. They come from grade school, high school and college, singly and in large groups. Boy scouts spend much time looking over Indian relics and asking questions.

No Admission Charge. The Society boasts that the museum is open every day in the year, Sunday and holidays, with no admission charge. Its working staff includes artisans, experts in restoration, and many items are overhauled. Little, their donors would not recognize them. "We even wash and iron some of the manuscripts," Dr. Gambrell said. "So if people have relics which we should have they should not hesitate to send them to us because of condition or appearance. In fact, if they are in poor condition we would rather have them like that than have them perhaps completely destroyed by someone who does not understand rehabilitation work."

"We have had one handicap," Dr. Gambrell emphasized. "Our name, Dallas Historical Society, has confused some people into believing our motives and interests might be selfish but such is not the case. We want to build the best possible factual history of Texas—that is our one objective—and our interest is State-wide. We are proud of our facilities for preserving and displaying Texas and we believe that we have made a good start. We know where there are lots of things which would like to have—and we'll get some of them. The hope of people have things, believe which they realize should be preserved and I want them to know that we have facilities to do just that."

Yes, it is most appropriate that a building which is "Texas" from roof to basement—caricatures, friezes, columns, panels, niches, corridors, halls and every other component part—should house such a fine collection of the spirit of Texas, past and present.

Will Rogers, Jr., Congressman. The young man, himself, insists that he isn't funny, and he certainly doesn't try to be a professional humorist. But there is a dry wit and subtlety in his witty epigrams.

When Will, Jr., was Lieutenant Rogers in a tank battalion.

MORE BOMBS for Hitler

It is a 1-foot long black metal bomb with a black and grey object, 8 feet 4 inches long, 2 feet 1 inch thick, and weighs 4,000 pounds. About 2,000 of these bombs are TNT and never used explosives, the rest are shell bombs. Dropped from 20,000 feet, they hit the ground at a speed of almost 500 miles an hour. It pulverizes anything it strikes and carries itself up. Then it explodes. The bomb case shatters, its more than 5,000 fragments that fly at 4,000 to 7,000 feet a second and may spray for 7,000 feet. The explosion itself will engulf everything within 420 feet of the bomb. Ground tremors may cause brick walls to check a way to collapse.

In early March black bombers were falling on Germany and Nazi-occupied France in mounting numbers. Allied bombers were hammering at communication lines and war plants. The offensive started last January seemed aimed at one great objective—to soften the German resistance as a prelude to Allied invasion of the Continent. Historic cities came under the bombs. London, ancient capital of Britain, and twice bombed, in whose market-places Joan of Arc met martyrdom. In one of the heaviest raids in history from 1,000 to 5,000 tons of bombs were dropped on the industrial city of Essen, all but wiping out the town and the great Krupp arm works. Symbolic of what was happening to Germany was the fate of the two shining cities of the Nazis, Munich and Nuremberg.

Munich Dear to Germans. Fourth largest city in the Reich, largest in Bavaria, Munich was the center of Aryan culture in the old Germany. The Nazis made Munich birth place of their party a political center.

On this old city of the "Mad King of Bavaria" Allied bombers recently dropped more than 800 tons of bombs. Block-busters were aimed at the Hauptbahnhof, Munich's central railroad station, through which traffic flows to Italy and France, and at the city's locomotive works and motor car factories. Nazis said some fell on other objectives—on the Pinakothek art gallery, less than a block and a half from the Brown House,

historical headquarters of the Nazi party. Long ago, when trade to the East passed through Southern Germany and the Danube-Nuremberg area, there stood a castle that guarded the route. The towers fell on 23 days when sea routes to the Orient were discovered, but soon it grew again, a city of fairy tales, of gingerbread, beer, and (to a tourist's taste) its old walls, ancient courtyards, and gardens and to wander up the hill to the Burggraben Castle and look out over the roofs and spires and distant villages.

Hitler selected Nuremberg as the rallying place for the Nazi party. He

built great stadiums there for party meetings. He turned the toy factories into making machine-guns, the machine shops to making Diesel engines for planes, tanks and submarines. Skilled Siemens-Schuckert airplane factory, Halffax, Siemens and foundry, factories. Other buildings suffered when block-busters fell and exploded. From the Germans came the ammunition. The British deliberately attacked and destroyed beautiful medieval buildings in the central part of Nuremberg.

LITTLE FUN

Superfluous
 "All will be great when baby comes, Maria to talk!"
 "Baby? Aw shucks, I don't see what he wants to talk for when he gets every thing he wants by just yelling!"

Warlike Coffee and Tea
 A man in a restaurant called the waiter over disquieted.
 "What do you call this stuff—coffee or tea?" he asked. "It tastes like arsenic."
 "It is taste like arsenic," said the waiter solemnly. "It must be coffee. The tea tastes like turpentine."

Researched
 Checking up her record with the package delivery, Mrs. Newville was startled by one item. "One ticket, 10 cents." "Ticket, she called on the phone and demanded to know the why and wherefore of such a ridiculous charge."
 "Never mind that," said the greaser. "I'll just get an abstraction you use for family vacation."

One Was at a Time
 At a certain U. S. military camp the officers who examine candidates for citizenship are given a wonderful illustration for testing the sense and mental equilibrium of foreigners who appear before them. Each candidate is asked what he would do if his State declared from the Union.
 "When they declare it in a Georgia man, his eyes flashed and he quickly got control of himself. "We got to finish this war first, sir," he said.

The Fighting Irish
 Two Irishmen were discussing the World War. One was exclaiming, "The British are fighting the Germans." "The Germans are fighting the British," the other said. "The British are fighting the Germans, and the Germans are fighting the British." "But we're neutral, don't we?" "Neutral?" "I understand," said the other Irishman, "but who are we neutral against?"

Came in Third
 While the district of Columbia group of children, who had done something wrong at a school, their mothers were spending a Sunday morning at a group of especially nice, but very noisy, Federal Government buildings. "These here mothers," he said, "call to mind the day I was down at the races at Belmont Park. Just before the fourth race, I looked over to the jockey and some other fellow, who must have been awfully disgruntled, came along and put a saddle on my back."
 "What did you do then?" "I asked one of the others to take one of your disbelievers."
 "What, in heck could I do?" said Private Hamilton. "I came in third."

Meaningless
 Tommy: "I don't think my aunt is going to stay very long because she didn't bring any luggage."
 Freddy: "Nah, that doesn't mean nuthin'. Our baby didn't bring any thing either and look how long she's staying!"

No Unknown Marines
 A delegation of society women approached one of the heads of the Marine Corps. "We have made investigations," said their chairman, "and we were distressed to find that, although many honors have been paid to the Unknown Soldier and to the Unknown Sailor, nothing has been done about the Unknown Marine. This committee wishes to rectify that deplorable situation, and we'd like to confer with you."
 The general jumped to his feet and proudly exclaimed: "Ladies, there is no unknown marine!"

The Good Samaritan
 Tom Daily of the Philadelphia Evening Bulletin gives a graphic example of how some of our present-day jokes stem back to days of long, long ago. Daily used to do popular monologues and included in his repertoire the story of an Irish man who noticed a wounded comrade in a certain headband. "What all you, me lad?" asked the marine.
 "Shore, and this an' me, and my leg off," answered the stricken comrade.
 Thereupon the marine, along his pal over his shoulder and started for the field hospital. As he was trudging along, a cannon shot came whizzing by and nipped off the poor fellow's head, unbeknownst to the good Samaritan. Arrived at the field hospital, one of the surgeons rebuked him for wanting everybody's attention by bringing in the corpse of a man whose head had been shot off.
 "The head," cried the marine indignantly. "Why, the fellow took it off himself!"

Lengthening the Short Circuit
 George Atkinson: "You say there's something wrong with your battery."
 Lady Moberly: "Yes, my husband thinks there's a short circuit. I wonder how long it will take you to lengthen it."

Dinner
 John leaning into the kitchen and slipping into a chair: "Well, the worst has happened, dear."
 Mrs. John (apprehensive): "What, what is it?"
 John: "The house called my attention to the business. He said 'I'm not coming out, he would be working for me, and that I would have to pay him a salary—same as I had been paid. My headache is how to make enough out of the business to pay him a salary. So far it ain't been done."

MORNING NEWS

Continued from page 1
 of widespread devastation as German bombers reached London. The Air Ministry News Service announced that it had been reported that some of the bombers had been damaged in the recent attack. It is believed that the bombers were shot down by anti-aircraft fire. The Air Ministry also reported that the bombers were seen to be dropping bombs on London. The city was again subjected to a heavy bombardment. The damage done by the bombers was estimated to be in the millions of dollars. The city was again subjected to a heavy bombardment. The damage done by the bombers was estimated to be in the millions of dollars.

WORLD'S ENLIST FOR THE WAR

This is the story of the spider and the armed forces of how spider silk is used in the making of indispensable instruments of war such as tanks, airplanes and telescopes. Spider threads are used for the high-tensile and vertical lines which hold the field of view. The need for spider silk for airplane bombs is also being put to the spider to work.

RAT FARM
 We have snake farms, frog farms, fox farms, etc., but a rat farm is something new. A man named Aaron Yochelson has a rat farm near Baltimore, Md. He raises about 20,000 rats annually, not near enough to meet the market demand.

Rats are wanted so urgently and by so many different people that Yochelson, young owner-manager of the Bunny Hill Farm, has had to decline orders from scores of rat buyers and limit his clientele to those with priority ratings. These include hospitals, research laboratories and commercial drug and pill manufacturers, all of whom make a point of trying out their theories of products first on rats. Which is fortunate to say the least, as the mortality rate among the rats after some of these experiments is high.

Rats figure importantly in hundreds of tests involving about such scientific mysteries as hormones, vitamins, new drugs, and why people get gray hair. The mighty brains investigating these mysteries wish to test their own rats, but are delighted instead to order them from the Bunny Hill Farm. Baltimore Sun.

Buying "Meat" Chickens
 With most of various kinds of birds and suburban hatcheries, it is being easier yet. Chickens who are in position to do so would do well to start an extra lot of chickens for meat purposes. At present, they can get these meat chickens on the market, the more likely they will be doing to help relieve the meat situation in the future. They will be doing to help relieve the meat situation in the future. They will be doing to help relieve the meat situation in the future.

They've Got What It Takes

THEY call 'em "Doubt hoppers"—those keen, alert glider pilots of the Army Air Force. Like so many Americans, they're learning an entirely new job—and proving they've got what it takes. It's the same all along the line—on the home front, too. Millions are proving that good old American "know how" just can't be beat. And that goes for cigarettes, too. For when you take Camels tobacco and that priceless "know how" of blending that produces a slow-burning cigarette, you've got the cigarette for steady smoking pleasure. Camels. Try Camels yourself—you'll find they give you smoking pleasure that holds up, pack after pack.

Laying Fresh Formula
 Here is a good laying, fresh formula meant for yellow corn meal. If white corn meal is used instead, one would better add five pounds of gypsum, green alfalfa leaves.
 20 lbs. yellow corn meal, finely ground
 25 lbs. bran
 25 lbs. wheat shorts
 20 lbs. meat scraps
 For the bran and shorts, one may substitute 40 lbs. ground whole wheat.
 The scratch grain to go with this mash is two parts by weight of yellow corn (cracked) to one part of wheat.

THE "T-ZONE"
 where cigarettes are judged. The "T-Zone" has had three—It's the proof that Camels are the best. Only you know what it means. Only you know what it means. Only you know what it means. Only you know what it means.

CAMELS

PROVIDER SUSTAIN THE PLACEMENT

It has puzzled more than a few people that the present food industry should find it more difficult to place their mineral supplements than it has been in the past. The reason for this is that the public has become more discriminating in its choice of food. It is no longer satisfied with the mineral supplements that are added to food. It wants to know where they come from and how they are placed in the food. This is the reason that the food industry is finding it more difficult to place their mineral supplements than it has been in the past.

PARROT FOR PLANE

Washington, D. C. (AP)—A downy, fluffy, pinkish bird, the first of its kind, was hatched in Australia, being used in a considerable extent in the structure of airplanes and even in engines. American inventors have developed a method of raising millions of which are used in the aircraft industry.

TRY THESE RECIPES

Stuffed Meat Loaf
1 pound ground beef
1/2 cup Kallgren's All-Bean
2 tablespoons minced onion
1/2 cup fat
1 teaspoon salt
1/2 teaspoon poultry seasoning
1 cup milk

Tea Fritters
Fritters provide an unusual and appetizing variety for breakfast. Roll the grapefruit sections in equal parts of flour and sugar and brown in a little fat.

Stuffing
4 cups soft bread crumbs
1/2 cup Kallgren's All-Bean
2 tablespoons minced onion
1/2 cup fat
1 teaspoon salt
1/2 teaspoon poultry seasoning
1 cup milk

Corn Flakes Waters
1/2 cup brown sugar
1/2 cup granulated sugar
1 egg
1/2 cup nut meats
1/2 cup shredded coconut
1/2 cup Kallgren's Corn Flakes
Cream butter and sugar thoroughly. Add egg and beat well. Add chopped nut meats, coconut and corn flakes. Mix well. Shape into balls. Roll in flour and sugar and drop on lightly greased cookie sheet. Bake in moderate oven (350° F.) about 10 minutes. Yield: 24 "Rose" cookies. (By) Recipe by Mrs. J. H. Rose.

Combine meat with onion and seasonings, squeezing out fat. Flatten on piece of wax paper into rectangular shape about 1/4 inch thick. Combine ingredients for stuffing, place on top of meat and form into roll. Press meat on and pressing roll of stuffing on. Roll in bread crumbs. Place in baking pan. Mix

with water and pour over meat roll. Bake in moderate oven (375° F.) about 1 hour. Yield: 8 servings.

FLUID COAL

Fluid coal is a powdered form of coal which when mixed with air can be made to flow through a standard pipe. It is being used by the National Bureau of Standards at Battelle Memorial Institute, Columbus, Ohio, as a possible substitute for fuel in industrial heating processes.

Fluid coal is produced by grinding coal to dustlike fineness in specially designed mills. A stream of air entering the mill picks up the fine particles and delivers them to a collector. The material which is collected will flow through your fingers and pour smoothly in the manner of a liquid. When mixed with air it atomizes. Fluid coal's properties will flow through pipes and spray out of jets in Germany, which produces much of its heating fuel from coal. It is said to produce about 90% as much heat as coal.

Salt is vital to the nutritional food

Uncle Sam wants you to eat MORTON'S SALT. It is essential for health and vitality. Morton's Salt is the purest and most refined.

They suffer from the disease until it is too late for even cancer is allowed to get into an advanced state no known methods of modern treatment will save the victim. But recently Doctors Ira Kaplan and Milton Zarrow, of the Radiation Therapy Department of Bellevue Hospital, New York, reported that daily drinking of large quantities of the whites of raw eggs had proved beneficial in the treatment of advanced cancer.

Declared Dr. Kaplan: "Advanced cancer responded in some instances after other methods failed by a diet that included 30 raw egg whites daily." A chemical called avidin, contained in egg whites, is apparently an important factor. The eggs are drunk raw, which cooking destroys the avidin. Kaplan diagnoses the recovery of a cancer cure, says that his experiment merely opens the field for further research and study. The theory on which his experiment is that cancer cells require Vitamin A, Vitamin B, Vitamin C, and Vitamin D. Vitamin B is known to destroy the vitamin B, egg whites might serve to starve the human cancer. News Review (Aug. 1947)
