Will Americans Be More Tender With Their Money Than Lives of Their Sons
 Washington, D. C.—A blunt challenge whether Americans will be more tender with their money than with the lives of their sons—confronts U. S. citizens as they prepare to meet the appeal of the government to put an additional \$3 billion dollars into the fight in the next three weeks.

YOUR ELECTRIC REFRIGERATOR
 is working harder than ever now
MIDSUMMER heat means extra duty for your electric refrigerator. The hotter the weather, the longer and harder it works to protect your perishables and provide you with extra quantities of ice cubes, frozen desserts and cold drinks.

No matter how high the temperature soars, you can depend upon your economical electric refrigerator to provide constant, food-saving cold. And although it may be using a little more electricity now, the small added cost is far outweighed by the food savings it makes possible.

HOW TO TAKE CARE OF YOUR REFRIGERATOR

1. Defrost whenever frost reaches 1/4 inch thickness. Frost forms faster in hot weather.
2. Open door only when necessary and close it quickly.
3. Do not make any repairs on the door.
4. Cover all food with moisture-retaining film to keep it fresh longer.
5. Keep cold control at lowest setting necessary to insure safe temperatures.
6. Use the freezing capacity. Return to normal setting promptly.
7. Do not overfill. Do not store more than 2/3 full.
8. Do not store food in the door.
9. Do not store food in the freezer.
10. Do not store food in the refrigerator.
