LOTTIE LOTTAFROST

who wastes electricity and shortens the life of her refrigerator by neglecting to defrost it regularly

Think how the freezer unit as an insulator, severely out-of-order, makes the motor run longer. For faster freezing and longer operating runs, frost should be removed whenever it reaches thickness of one-quarter inch. And for longer life and better all-around performance, follow these bitter-healthy tips on refrigerator use and care:

- Don't store hot foods. Let them cool first.
- Cover all liquids in retard formation of frost.
- See that door gasket seals tight. Do not open door unnecessarily.
- Don't overfill shelves.
- Use fan (freezing sparingly). Don't set temperature control higher than necessary.
- Keep unit compartment and condenser coils clean.
- If an open unit model, oil periodically or directed by manufacturer. Sealed unit models need no oiling.

It's a good idea, too, to have your refrigerator checked by a serviceman at least once a year. Remember - it must last for the duration!

So You Can't Buy Another Bond

That's a bond book of this American soldier, as he lies in the mud of France, his hands clasped in prayer. When you are asked to buy an extra War Bond to help the attack on the Axis, think of the picture of your fellow American, blasted by the explosion of a gas bomb, thousands of miles from home. Then, brother, don't you think you will want to dig a little deeper to look up the soldier?
