### with ATTIC VENTILATION

Your attic is a HEAT TRAP without ventilation

COOL. Cooled, radiant heat with attic ventilation

In summer, your attic is a heat trap, building up temperatures as high as 25 to 35 degrees above outside temperatures. This stored-up heat acts like a blanket keeping your house uncomfortably hot long after the sun goes down.

Attic fan ventilation eliminates this principal cause of summer discomfort by drawing cool air in through the windows, circulating it about the house and blowing it out through attic vents, thus cooling the entire house. Instead of sitting up until midnight waiting for the house to cool off, you can retire early and sleep in comfort.

Attic fans are available now for immediate installation. Consult your electrical, plumber or dealer of this company now for the facts about this low-cost way to summer comfort.
