ENJOY Open Porch Comfort THROUGHOUT THE HOUSE with ATTIC VENTILATION

Your attic is a HEAT TRAP without ventilation.

Remember those stifling hot nights last summer, when you sat outdoors until late, hating the idea of going into the hot house to bed?

This summer can be different. If you install an attic ventilating fan before extremely hot weather arrives, an attic fan draws in outside cooling air through the windows, circulates it about the house and blows hot, stale air out through the attic vents. It makes your entire house as cool as a breeze swept, shady, open porch. You can retire early and enjoy a comfortable night's sleep no matter how hot the weather.

A limited number of attic fans are available now for immediate installation. See your electric appliance dealer or this company for full information about this low-cost way to summer comfort.

COOL breezes replace heat with attic ventilation.
