**NOT BIG ENOUGH FOR THE JOB**

**BUS STOP**

**Is your home wiring system big enough for its job?**

The amount of electricity that a home can handle is limited by the size of the wires. Just as the amount of water a pipe can carry is limited by the size of the pipe, so the amount of electricity a home can handle is limited by the size of the wires. Wiring that is too small drops voltage and causes lights to flicker and appliances to operate sluggishly. Frequently, circuits are blown fuses due to overloads. An insufficient number of branch circuits and insufficiently sized wires are the most common causes of these troubles.

**What is adequate wiring?**

Adequate wiring simply means a service entrance large enough to bring in as much electricity as your home may need at any time, a main branch electrical entry to carry the full amount of electrical energy to your lights and appliances, plus plenty of outlets and switches properly located. Adequate wiring is the key to better electrical living.
