carry varieties especially suited to this area, including Climax and delite. The plants are available in one gallon, two gallon, and five gallon sizes.

According to Clarence, one of the reasons rabbiteye blueberries are suited to our area is because they require a light, well drained, acid soil. In fact, sands and sandy loams are ideal if the pH is between 4.0 and 5. By the way, this variety is call "rabbiteye" because the immature berries are a

ink color which resembles the eyes of domestic white rabbits. One of the major drawbacks to growing blueberries on a large scale in East Texas is that although the average annual rainfall is sufficient, its distribution scale operations require irrigation systems.

For more information on growing blueberries in East Texas stop by the County Extension office in the Courthouse and talk to Bob, Janie, or Diane. They have several brochures on the subject and all of the materials free.

Blueberries turn from pink to a waxy blue as they mature and ripen. Harvest them when they are a light, powdery, grayblue color. They will not continue to ripen once they are picked. Store in the refrigerator for up to two weeks. Wash just prior to use. Blueberries freeze well for up to 12 months. Do not wash before freezing.

Blueberries are delicious, nutritious, and low in calories. They contain Vitamins A and C, Calcium, phosphorus, and potassium. Eat them as snacks or add them to fruit salads, pancakes, muffins, or jams. Toss them into punch or blend them with vanilla ice cream. Be generous.
